SKILLS SUMMARY

- **Languages:** C, React, SQL, JS
- **Tools:** GIT, MySQL
- **Soft Skills:** Leadership, Event Management, Writing, Public Speaking

PROJECTS

- **Market Me(GitHub Link):** Market Me is a comprehensive digital platform designed to bridge the gap between startups and marketing agencies by removing the traditional middleman. The platform is built using React for a dynamic and responsive frontend, styled with HTML and CSS for a clean and intuitive UI, and powered by MySQL for structured data storage. It allows startup founders and entrepreneurs to browse a curated list of verified marketing agencies, view detailed profiles, read reviews, and contact agencies directly through the platform. Agencies can also register and showcase their services, past work, and pricing models to attract new clients. The main goal of Market Me is to streamline the client-agency matchmaking process, making it faster, more transparent, and cost-effective. By leveraging technology to create direct, real-time communication channels, the platform empowers startups to make informed marketing decisions that align with their growth goals.
- **PG Life(GitHub Link):** PG Life is a fully functional web application developed to simplify the process of finding and booking paying guest (PG) accommodations for students and working professionals. Built with React for an interactive and seamless user interface, PHP for robust backend functionality, and MySQL for handling and storing user and property data, the platform offers a complete solution for PG hunting. Users can search for PGs based on location, budget, gender preferences, and amenities like Wi-Fi, meals, and air conditioning. Each listing provides detailed information including photos, rent, reviews, and owner contact options. The application supports user authentication, enabling tenants to maintain a profile, track their bookings, and save favorite properties. Property owners can also register and manage their listings, update availability, and respond to inquiries. PG Life eliminates the need for brokers, reduces booking hassles, and offers a transparent, easy-to-navigate experience for both tenants and PG owners.
- **Vayosa Studios(GitHub Link):** Vayosa Studios is a sleek and performance-optimized website crafted for a professional graphic design studio, developed using React and Vite to ensure high-speed rendering and a modern development workflow. The website serves as both a digital portfolio and a client outreach tool, showcasing the studio's expertise in areas like brand identity, digital illustrations, UI/UX design, and creative advertising. With a focus on visual storytelling, the site includes animated project showcases, case studies, and testimonials to build trust and attract new clients. The clean layout and smooth navigation are designed to reflect the studio's aesthetic values, while interactive contact forms and call-to-action sections encourage client engagement. Vayosa Studios' website not only highlights their creative capabilities but also provides a seamless channel for potential clients to learn more about services, initiate collaborations, and build long-term creative partnerships.
